

COMMUNITY LANDSCAPE
 Living in close proximity to so many other people is both a challenge and an opportunity. Whilst **the landscape is the key** area in which residents meet and interact, we must also allow for people to use the landscape in private more intimate ways. The landscape creates and provides a number of different locations to cater for and enhance **the creation of 'a community'**.

EXERCISE
 All ages and abilities can take part and benefit from **exercise** and within the landscape we aim to provide facilities to enable and encourage people to take part, this includes, areas set aside for yoga, tai chi, team sports, exercise zones (for varying abilities and ages), jogging and walking tracks and many more.

MEETING
 Sometimes the simplest pleasure is to **meet and talk** with friends and neighbours. In our landscape we aim to provide a plethora of **different meeting spots** of differing scale and ambience, giving residents the chance to discover and enjoy new area and arenas with their fellow residents and friends.

PLAY
 Play develops community spirit, can give **health benefits through exercise** and be a valuable learning tool for all ages. We aim to provide for all ages, interests and abilities, from play areas to toddlers to climbing nets for older children to Mahjong and chess tables for older residents

HEALTHY LIVING
 As well as giving residents a chance to **develop a healthy body** through exercise and strong community spirit through social interaction we will, using project landscape to give the residents the chance to grow **their own fruit and vegetables**. We have set aside areas within the landscape for this purpose. This will engender both the sense of responsibility and accountability regarding our sources of food, as well as encouraging community activities and **healthy living**.

CORES AND COLOR ORIENTATION

MULTIPLE PERCEPTION / A LANDSCAPE WORK
 From different points of view, the buildings show their different dimensions. Thanks to the step terraces, the project adapts its scale to each urban situation. From the canal, it is at pedestrians' scale and is perceived as multiple terraces. From Punggol Central, it is 18 storeys towers and finally, once looked from between the wings, it becomes buildings with opened courtyards. **The multiple perception** is the successful key of the space richness and gives the project a **strong landscape identity** in the New Punggol Town.

TERRACES TYPOLOGY AND 120° ANGLE
 120 degrees angles and the terraced typologies give a **diversity of perception** from both inside and outside. The project is not perceived as a whole of repetitive modules, but as a **landscape adapting itself to different site situations**. By stepping downward the Punggol canal, the project creates accessible terraces in such a way that all the spaces linked to the water promenade could enjoy the barrier free access everywhere. The dwelling units at the top floors can enjoy views to both punggol central and the water way promenade. Pedestrians from punggol walk and passengers from the LRT station are welcome into the site on a C platform between wide spread wings of the buildings. The MASS geometry of the buildings define **hexagonal VOID courtyards**. These semi-private spaces are valuable urban spaces as they enhance both social relationship between residents and their relative privacy toward the water promenade. The obtained diversity of space enriches the site and maintain the **dialogue with the water-way promenade**.
